

COMPANY OVERVIEW

AI & software engineering

AI integration and software engineering for government teams and the partners who serve them.

Areas of work

AI and workflow integration	Connect models, knowledge and the systems your team already uses.
Model and deployment evaluation	Choose an operating fit using task evidence and real constraints.
Reliable software and technical handoff	Make the behavior testable and the operating path understandable.

How an engagement starts

Share the requirement, operating environment and constraints. Agree on a bounded contribution, the deliverables and the evidence needed to accept the work. Scope and responsibilities are agreed for each engagement.
